

## › Fire Alarms & Monitoring

Properly serviced fire alarms not only help save buildings and businesses – they help save lives. Florida Fire Service's fire alarm testing and maintenance programs give you the security of knowing your fire alarm is being maintained as per state, local and insurance requirements. We back it all up with 24 hour, 365 day services, helping you avoid facility down-time or costly fire-watch services. Should the worst happen – our team of certified technicians will not only have you prepared, but also our monitoring programs will help alert authorities quickly and get the fire department in motion as soon as possible.

We provide a variety of alarm service & repair services including:

- EVACS systems
- Fire alarm monitoring & inspection
- 24-hour emergency repair
- Quarterly semi-annual and annual inspections as needed
- Service, repair & maintenance

Be sure to ask us about our service bundles!

Call us today and we'll put together a comprehensive fire alarm maintenance plan for your business. We can bundle virtually any of our services into a personally tailored plan to help you cut down on multiple visits and save money!

## › Emergency Lighting

Emergency lighting equipment and exit signs are required in all commercial, industrial, and institutional buildings to provide sufficient illumination for safe and orderly egress during a power outage, fire, or other emergency. But emergency lighting equipment is not simply a series of illumination products; rather, these products are specially designed for life-safety applications, satisfying specific code requirements. State and local inspectors can visit unannounced at any time to inspect equipment for reliable operation.

The National Electrical Code and National Fire Protection Association (NFPA) Life Safety Code, which detail installation requirements, operating parameters, and guidelines for regular maintenance, require monthly testing and record-keeping. In addition, many state fire codes require a 30-second test of all emergency lighting equipment monthly, and a 90-minute full battery discharge once a year. Many facilities would not pass inspection.

Many building owners depend on in-house maintenance staffs to perform checks of emergency equipment and systems. But maintenance workers may not have the training, the time, or the experience to provide the regular and proper maintenance of these

critical life-safety systems.

Florida Fire Service has tested, repaired, and maintained high-quality emergency light systems for over 40 years. Our fully trained & certified staff is constantly pushing themselves to stay at the forefront of lighting technology in order to provide you with the best, most efficient and cost-effective means of security.

We can assist with a variety of light and signing service, including:

- Emergency lighting service & repair
- Exit & emergency combination packages
- Certification & inspections
- Compliance with Life Safety Code 101
- Battery & bulb replacement

We have helped hundreds of companies like yours solve their lighting issues. Avoid serious liability, expensive fines and above all else – keep your people safe.

## › Fire Hydrants & Fire Pumps

Buildings that are located close to fire hydrants & water pumps are 8 times more likely to be safe in the event of a fire. We offer a full range of hydrant and pump services – from routine maintenance to inspecting your hydrant to insure it's up to code.

- Annual Fire Hydrant Flow Testing
- Fire pump repacking & rebuilding
- Annual Fire pump flow testing
- Full inspection and ongoing maintenance services
- Testing & Inspection services

We also help service backflow preventers that protect your water supply from being contaminated by dirt & other potentially harmful materials. Florida Fire Service sells and services a full range of backflow preventers should the need arise.

### › Fire Extinguishers

Fire extinguishers can prevent small fires from becoming big ones and can be your "First Line of Defense" in the event of a fire. However, with so many different kinds of extinguishers on the market place, it can be challenging to figure out what kind of equipment is right for you and your situation.

At Florida Fire Service, not only can we help you find a solution that meets the needs of your facility, but we can also provide you with the tools, training and services to make sure you'll get the most out of your extinguisher should you ever have to use them.

We offer a full range of extinguisher-related services, including:

- Service & repair
- Recharge, hydrostatic testing
- Products
- Testing & inspections

From wading through your options to helping you maintain your extinguisher over time, we'll be there to help you find what you're looking for! Any and all products and services we offer will also be in compliance with NFPA standards and local fire codes.

### › Fire Sprinklers

According to the National Fire Protection Association, installing sprinkler systems reduces the risk of damage and serious injury during a fire by over 80%

A responsible business wants to be protected from fire. A fire sprinkler system will help save your building and its occupants, detecting a fire before it spreads and help to put it out automatically. Service and repair are required by law; and with good reason, too! Sprinkler systems are one of the absolute best ways to protect your facility today.

We offer a full range of sprinkler services, including:

- Service & Repair
- Products
- Testing & Inspections

From helping you choose the right system for your building to the engineering, design, remodeling, and certification of your sprinklers, Florida Fire Service will help you throughout the process, listening and helping you face any and all challenges that may arise along the way.

### › Fire Suppression Systems

Florida Fire Service offers a wide range of Fire Suppression products to fit virtually any need at a reasonable price. Whether it's outfitting a few rooms in a factory or outfitting an entire restaurant kitchen, we carry the products you'll need to keep your facility and the people who work there as safe as possible.

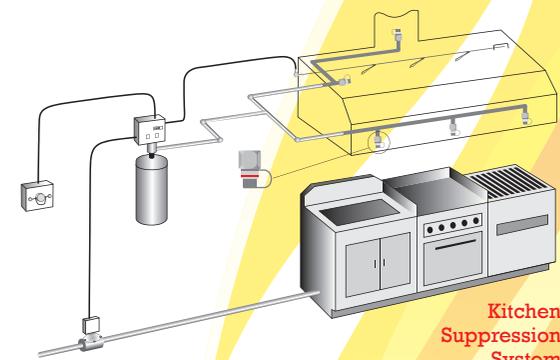

We offer a variety of suppression systems, including:

- CO2 systems
- Restaurant hood systems
- Clean agent suppression
- Foam systems
- Dry chemical systems

For years, suppression systems have maintained an impressive 97% effectiveness rate in controlling fires in large manufacturing plants, hospitals and other commercial facilities. Talk with our fully certified staff today and we'll help you find a solution that fits the unique needs of your building!

Bundle your service & repair needs.

If you have multiple fire service and repair needs at your facility, Florida Fire Service can work together with you to tailor a program that works specifically for your situation. Instead of calling us multiple times for multiple needs, you can package our services to be all-inclusive – meaning you cut down on visits and save money in the process.
